During the last decade, satsuma and cold hardy, fresh market citrus have generated more interest in north Florida than any other tree crop. There is a growing satsuma industry in the state’s panhandle. The satsuma acreage in Florida has increased substantially with 100 acres planted in Gadsden county alone. Some new developments in north Florida include increased nursery production of satsumas and the establishment of an orange juice plant in Jefferson county. Despite this current development, grower meetings regarding important fundamental issues such as variety improvement, rootstocks, cold hardiness, insect and disease control are rare in the area. This meeting aims to cover the major issues that north Florida citrus growers are currently facing.

April 18, 2019
8:30 a.m.-3:00 p.m.

Location
North Florida Research and Education Center
155 Research Road Quincy, Florida

Cost: $10
Includes access to the lectures, coffee break, lunch and the demonstration in the citrus grove.

Registration
Register by April 17 by email or phone or on site the day of the event:
Charlene Cupp Kinch | accupp@ufl.edu | 850-875-7105
